

Intelligent System Emulation Technology

Agilent Technologies Inc. has introduced the availability of the newest version of its Intelligent System Emulation Technology (ISET). This new version of ISET allows emulation of the Waters Alliance LC systems.

With ISET, scientists can transfer the legacy methods used on the Waters Alliance LC systems to the Agilent 1290 Infinity LC platform.

The 1290 Infinity LC together with ISET allows users to emulate other (U)HPLC instruments through a mouse click; run existing (U)HPLC methods without modifying the method or system; and deliver the same retention times and peak resolution for better method transfer compared with existing workarounds such as adding an isocratic hold.
