

## Tablet Documents Microscope Photos

Carl Zeiss Microscopy has introduced the Tab4Lab, a tablet featuring a touch pad and the required software. In combination with the AxioCamERc 5s camera, the two components form an image recording system. The software is based on ZEN imaging software and has been adapted to tablet PCs and can be operated through a touchscreen. The workflows are modeled on those used in clinical laboratories and in the quality assurance industry.

Easy transfer of image data through a SD card or other data carriers makes the image recording system suitable for use in training.
