

Miniature Infrared Temperature Sensor

Omega Engineering has introduced its new series of miniature infrared temperature sensor. The OS-MINI features a miniature sensing head that makes the CE-compliant instrument suitable for mounting in tight spaces. The sensor also features screen color changing capabilities to indicate alarm mode and optional touchscreen for temperature indication and configuration. The instrument also features an optional high-ambient sensing head that withstands up to 180 C (356 F) without cooling and an adjustable emissivity setting suitable for paper and plastics.
