

Gas Chromatograph

Agilent Technologies Inc. has introduced the Agilent 7890B gas chromatograph, which is based on the Agilent GC platform.

The 7890B offers improved performance specifications over previous Agilent GC platforms, with advances in detector modules. It also offer lower operating costs and eco-friendly operation with power/gas management and sleep/wake modes. The system also offers the ordering of consumables and parts with an interactive graphical Part Finder tool and consumables database; easier, faster method development with integrated GC calculators and wizards; improved recovery of active compounds with Agilent's end-to-end Inert Flow Path deactivation technology; and reduced downtime for mass spectrometer maintenance using the Fast Vent feature.

The gas chromatograph runs on OpenLAB chromatography data system software.
