

Portable Infrared Analyzers

Wilks Enterprise will introduce a new generation of portable infrared analyzers—the InfraCal2—at Pittcon 2013.

The analyzers combine improved electronics—which improve signal-to-noise ratio—with a touchscreen display that allows for new options and features including multiple calibrations, internal data logging, alarm functions, password protection, and data transfer capabilities. The result: a compact analyzer weighing less than 6 lbs with no moving parts, which improves sensitivity and detection limits for various on-site measurements.

On-site measurements using the analyzer typically take from one to 10 min, depending on the analysis.

Visit Wilks Enterprise at Pittcon booth #934.
